Mobile Driver Vehicle Safety Check

Faster, Safer, Smarter

Avoid roadside prohibitions due to roadworthiness.

Transform traditional paper-based, walk-around checks to real-time, one-time data input and compliance that's completely configurable and cloud-based, with our enterprise class mobile driver vehicle safety check software.

There are many reasons why SmartCheck is better for any size transport business to make their operations faster, safer, more cost-effective and confident of compliance.

Right now, lots of businesses are discovering how easy Descartes SmartCheck makes it to transform their previously paper-based and slow vehicle checks, to join up information and reporting to ensure everyone, from driver to transport manager, has easy, instant access to information vital to compliance.

SmartCheck. Faster, Safer, Smarter.

Smarter real time vehicle check reporting made easy.

SmartCheck is Descartes' Mobile Driver Vehicle Safety Check (DVSC) solution.

It's completely configurable, cloud-based, enterprise-class software for assuring compliance with walk-around driver vehicle safety checks, required by the Driver and Vehicle Standards Agency (DVSA).

SmartCheck captures data from each vehicle check in real-time without the errors and delays of re-keying data from forms when they are eventually returned to the depot.

Any issues recorded can be dealt with in a timely fashion.

SmartCheck also provides a complete auditable record of checks, any defects and corrective actions. As with all Descartes' SmartCompliance solutions it comes with powerful reporting to turn vehicle check data into useful management information, to maintain a compliant transport operation.

Why SmartCheck?

- ✔ Flat fee per vehicle
- ✔ Simple and intuitive
- ✔ Customisable check forms
- ✔ Compliance and activity reports
- ✔ Location, duration and time recorded

Easy to set up, roll out and install, SmartCheck offers benefits for every role in your organisation by making data reporting easy and accessible.

By capturing walk-around vehicle check results in real time, complete with pictures if needed, your people have access to reliable data and management information, can easily demonstrate compliance and use the information to focus on any problem areas of non-compliance that could result in expensive fines or loss of the operators' licence.

DVSC guides commercial drivers to perform essential safety checks on vehicles and equipment used on public roads and ensures the checks are carried out by recording when the check took place, the GPS location and duration of the check.

DVSC enables:

- Commercial Drivers to perform safety checks of vehicles and other transportation assets using smartphones and industrial handheld computers.

- Transport Managers to see the status of all vehicles in the fleet in real time and track the history of safety checks and repairs using a web browser.

- Fleet Mechanics to log repairs and to set the safety status of vehicles in the fleet using a web browser.

- Transport Operators to generate electronic compliance reports for the DVSA and generate internal reports of defects and repairs.

SmartCheck

Features	Benefits
Part of the Descartes SmartCompliance portfolio.	Get a complete compliance overview with tachograph data, drivers' hours, vehicle checks, while ensuring your drivers are licensed to drive and hold a valid CPC.
Download the DVSC App from Google Play.	Quick and easy set up and roll out to all drivers.
Flat fee per vehicle, per month with no limit on the number of checks and no hidden charges for support or reporting.	Cost effective and easy to budget - plus save money with a pre-pay option.
Simple and intuitive user interface for drivers.	Easy and seamless transition from paper-based reporting to real time, electronic vehicle check data capture.
Customisable check forms with no limit to the number of forms created and used.	DVSC can be used for and adapted to any vehicle or mobile asset that needs a walk-around check.
Configurable safety check zones and check points.	Adaptable to any mobile asset.
Can submit pictures to support the data submitted.	Visual evidence of any defects helps the maintenance team to take corrective action.
Web-based, secure solution accessed with a secure user name and password.	No need to install software or manage IT - access any time any place, over any internet enabled device.
Asset Dashboard.	The complete picture of all assets, status, availability and action taken to correct reported defects.
Repairs Page.	Simple view of all defects and repairs status.
Compliance Report - high-level summary report of one or more vehicles.	Easy and quick reporting.
Activity Report.	Monitor individual driver behaviour and review in detail asset safety history.
Forms Workbench.	Create, edit and assign safety check forms to individual assets.
ISO 27001 Accredited.	Your data is safe, secure and always available.
Fully supported via the Descartes Service Desk.	Help is always on hand should you ever need it.

The Complete Picture

SmartCheck is part of the Descartes' SmartCompliance portfolio that includes Smartanalysis tachograph analysis and SmartLicence driving licence and driver CPC verification with DVSA.

Descartes Mobile

SmartCheck, Mobile Driver Vehicle Safety Check (DVSC) is also part of the Descartes Mobile family which includes applications for improving efficiency and operation of fleets. Mobile applications include Proof of Delivery and routing and delivery schedules.

Descartes Systems UK Ltd is accredited to ISO27001 – the international standard for information security management and are an accredited supplier of KPIs for the DVSA's Earned Recognition scheme.
